

EVERY AI COMMIT DESERVES A *PASSPORT.*

Pedigree signs every AI-authored commit with a cryptographic attestation, anchored in a public transparency log. C2PA for source code.

Git blame doesn't tell you *who wrote it.*

42%

of committed code is AI-assisted.

GitHub / Sonar, 2025.

\$35M

Maximum fine per violation.

EU AI Act Article 50. August 2, 2026.

0

Standards for code provenance.

C2PA covers images and video. Code has nothing.

Six cryptographic checkpoints.

Every AI-authored commit flows through a tamper-evident pipeline before it reaches your codebase.

01

Code written
Human or AI

02

Bob detects
Provenance Officer

03

Predicate built
MCP assembles

04

DSSE signed
ed25519 keypair

05

Rekor logged
Transparency log

06

Passport ready
Verifiable

Pick a model. Generate code. *Sign it.*

Three authorship scenarios. Six AI models. Real cryptographic signing.
One interactive demo judges can try right now.

Human Only

Type code yourself. No AI. No approval needed.

AI-Assisted

Generate with AI, then edit. Browser approval required.

AI Autonomous

AI writes it all. You approve. Model identity recorded.

6 MODELS VIA OPENROUTER

Gemini 2.5 Flash

GPT-4o Mini

Claude 3.5 Haiku

Granite 4.1 8B

Llama 3.3 70B

Grok 4.3

```
"authorship": { "kind": "ai-autonomous", "humanApprover":  
  { "approved": true, "approvalSig": "3045022100..." } },  
"agent": { "model": "google/gemini-2.5-flash" }, "scope":  
  { "riskClass": "high", "linesAdded": 174 }
```

Zero mock data. Every field *is real.*

- ✓ **ed25519 DSSE** real signing keypair
- ✓ **Rekor** public transparency log entries
- ✓ **Web Crypto ECDSA** browser approval
- ✓ **GitHub API** real commits to public repo
- ✓ **Prompt hash** SHA-256 of actual prompt

Provenance Officer *mode.*

- ✓ Reads AGENTS.md for risk classification
- ✓ Gates HIGH-risk commits on human approval
- ✓ Computes SHA-256 content hashes
- ✓ Invokes pedigree-mcp via MCP protocol
- ✗ Refuses to push unsigned commits

3 CUSTOM SKILLS

sign-on-commit

Pre-commit attestation signing

verify-chain

CI attestation verification

render-passport

14 BOB SESSIONS EXPORTED

Full lifecycle: init, plan, mode, skills, MCP, signing, verification, CI, cross-agent, approval gate, EU AI Act audit.

Every enterprise needs this *before* *August.*

ENTERPRISES

Using AI coding tools need compliance audit trails before the EU AI Act deadline.

REGULATORS

Need to verify which parts of a codebase were AI-generated during software audits.

PROCUREMENT

Evaluating AI-generated software in supply chain assessments need provenance data.

Every AI commit deserves a *passport*.

So your codebase can survive August 2, 2026.
